DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-5, 7-13 are drawn to a method of manufacturing a purified product of a liquid medium-chain alkyl-modified polydimethyl siloxane and a cosmetic material .

Group II, claim(s) 6 and 14-16 are , drawn to a cosmetic material comprising 0.1 to 95 of an oiling agent and a surface active agent and water.

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

As set forth in Rule 13.1 of the Patent Cooperation Treaty (PCT), "the international application shall relate to one invention only or to a group of inventions." Moreover, as stated in Rule 13.2 PCT, Unity of Invention is satisfied "where a group of inventions is claimed in one and the same international application, the requirement of unity of invention referred to in Rule 13.1 shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art so linked as to form a single general inventive concept." The instant method of manufacturing alkyl-modified polydimethyl siloxane of claim 1 does not present a contribution over the prior art. Claim 1 lacks inventive step. Claim 1 is obvious over JP 4-046933 ('933) . JP '933 under abstract teaches silicone oil having hydrogen atom attached to silicone with an organic compound having C-C double bond an in the presence of catalyst to give silicone oil. The values of n and m shown in the abstract are different to that claimed. Therefore it would be obvious to one of ordinary skill in the art to use the method of JP 4-933 and change the siloxanes staring material so that different m values and different values are used and use the organic compound having C-C double bong and use a catalyst so that hydrogen atom which is attached to silicone is replaced by alkyl group since the process proceeds analogously.

As a result, as currently presented, the instant composition claim does not share a special technical feature with the method of use claim 34 and, as such, unity between the above Groups I - II is broken.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Due to complexity of the action, examiner submitted Election Requirement in writing in lieu of calling applicants' attorney.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
